

Engineers for Renewable Energy R&D

We are looking to employ 2-3 engineers (from Mechanical and Chemical streams) with a flair for research, development and innovation. This is a long term assignment and excellent candidates will have a shot (after 5-7 years) at being a partner in running our NGO.

The projects are for renewable energy especially for rural poor and the candidates should have very good knowledge of engineering, capability of getting prototypes designed and fabricated (knowledge of AutoCAD and other design software like Solid Works, etc. is a must) and experimenting upon them.

Initially the work is for developing suitable renewable energy devices for rural areas and later on to help market them.

The candidates should have 1st class in B.Tech or M.Tech in Mechanical or Chemical Engineering from reputed institutions with few years of experience in hardware development. Excellent remuneration will be offered to candidates who have developed devices and projects in previous jobs.

This is not just any other job but an opportunity to become a part of a mission or movement to use best tools of science and technology for improving the lives of bottom of pyramid.

Please send detailed CV with 3 references to:
