

Future Projects at NARI

Agriculture

- To mechanize the current process of syrup production from sweet sorghum, a pilot plant will be set up at the institute.

- Precision and container agriculture techniques will be developed for fodder production. NARI also plans to popularize Opuntia as a fodder crop in India.

- A major program on production of pure honey will be started – both collection and processing will be done.
- NARI envisages to work on improving upon the small cold pressed oil production machines and popularize them on large scale.

Renewable Energy

- The existing design of Lanstove will be improved. R&D on connecting thermo-electric devices to the Lanstove for charging cell phones and batteries will be carried out.

- The existing design of Solar Water Purifier will be improved. Work on extending its design for producing ice through absorption refrigeration will be carried out.

Animal Husbandry

- The training sessions and the workshops for sheep/goat keepers, livestock supervisors and veterinarians will be continued.

- Frozen buck and ram semen straws will be disseminated locally and nationally

Sustainable Development

- NARi would like to develop an ecosystem in the country for R&D in rural-based problems. For the purpose several workshops, talks and seminars on sustainable rural development will be organized
